

GreenWood Resources Environmental Stewardship Policy

GreenWood Resources (GWR) is dedicated to being the global leader in the development and management of certified short rotation, high yield tree farms. GWR balances environmental needs for sustainable forestry practices with market demands for timber products and biomass for renewable energy. At our core value is developing sustainable, profitable tree farm businesses that support rural community development and environmental stewardship. GWR and our investors believe that profitability and stewardship are complimentary.

We will accomplish our goals through our commitments to:

- Certification and third party audits – GWR tree farms are Forest Stewardship Council (FSC) certified and future investments will be made with the intention to follow FSC commitments.
- Establish and maintain a resource management system that provides the framework for planning, implementing, evaluating, and improving the effectiveness of our stewardship activities.
- Minimizing our impact on natural resources by practicing water conservation and minimizing chemical use.
- Maximizing the wildlife benefits of our tree farms by enhancing habitat, managing for beneficial species and protecting rare species.
- Comply with applicable federal, state, and local laws and regulations.
- Providing a safe and healthy work environment where employees and contractors are treated respectfully and have the ability to grow and excel.
- Interact with the communities in which we do business by forming Citizen Advisory Committees that provide feedback on our operations from a local community and regional level.
- Continuously improve our management systems so that we consistently meet or exceed our environmental and business goals.

Through our environmental stewardship commitments GreenWood Resources will serve as a global model for sustainable businesses and promote our values in all areas that we do business.
